The amount of malware in the world is increasing, and it can have devastating effects on your organization. Prevention — not reaction — is the best defense.

> 140 million new malware variants in 2015.1

390,000 new malicious programs every day.2

$300,000 increase in the average cost of enterprise data breaches in 2015 from 2014.4

Ransomware is one of the top threats — and it’s on the rise. Ransomware damages reputations, drains productivity and costs organizations millions.400,000 ransomware attempts in 2015.5

$325 million ransom paid by victims in 2015.6

Stop malware in its tracks with Dell Threat Defense

Effective: Stops malware before it can even run using dynamic mathematical models and artificial intelligence.

Simple: Streamlines setup, management and operation with a cloud-based management console and subscription pricing.

Lightweight, always on: Keeps working even when not connected to the internet. Consumes minimal CPU and memory resources.

Protects productivity: Keep employees working by helping avoid the downtime caused by malicious attacks.

You’ve got a business to run — you can’t devote resources to dealing with all these rapidly evolving threats. Leave that to us.
